Costs of Alzheimer's to Medicare and Medicaid

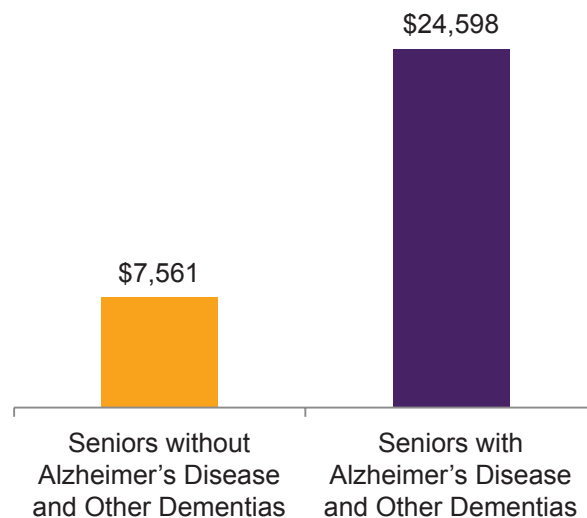

Alzheimer's is the most expensive disease in America, costing more than cancer and heart disease.

- In 2019, the direct costs to American society of caring for those with Alzheimer's and other dementias will total an estimated \$290 billion.
- A study found that in the last five years of life, the costs of a person with dementia, on average, total more than \$287,000 (in 2010 dollars). This is compared with \$175,000 for a person with heart disease, and \$173,000 for someone with cancer.

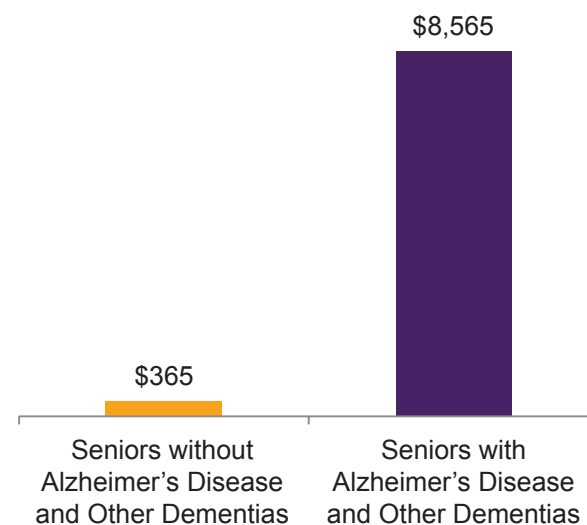

Most of these costs are borne by Medicare and Medicaid.

- In 2019, Medicare and Medicaid will spend an estimated \$195 billion caring for those with Alzheimer's and other dementias—67 percent of total costs.
 - An estimated \$146 billion will be spent by the federal government under Medicare.
 - This means that 1 in every 5 Medicare dollars will be spent on someone with the disease.
 - Federal and state governments combined will spend an estimated \$49 billion under the Medicaid program caring for those with Alzheimer's and other dementias.
- Average per-person Medicare spending for seniors with Alzheimer's is more than three times higher than average per-person spending for all other seniors. Under Medicaid, spending is, on average, more than 23 times higher.

Average Annual Per Person Medicare Spending

Average Annual Per Person Medicaid Spending

With the aging of the baby boomers, the number of Americans aged 65 and older with Alzheimer’s is expected to dramatically escalate.

- Today, an estimated 5.6 million Americans aged 65 and older are living with Alzheimer’s disease.
- By 2050, there are projected to be nearly a million new cases every year, with another American developing Alzheimer’s every 33 seconds.
- The number of Americans living with Alzheimer’s will nearly triple by 2050 to 13.8 million—and could be as high as 16 million.

Costs will also expand in lockstep. By 2050, combined Medicare and Medicaid spending on people with Alzheimer’s will nearly quadruple to \$770 billion (in 2019 dollars)

- In 2050, Medicare spending on people with Alzheimer’s will total \$578 billion—an increase of 296 percent from today’s spending levels. This will represent an estimated 1 in every 3 dollars of total Medicare spending.
- Medicaid spending on people with Alzheimer’s will increase 292 percent between now and 2050, as costs will reach \$192 billion in 2050.
